

WHAT IS BELLA?

FOUR TO SIX MEDICATIONS THAT INDEPENDENTLY REDUCE CRAVINGS AND MODULATE APPETITE

Bella is a combination of several drugs that independently have shown tremendous promise in supporting weight loss. These medications act on the hypothalamus of the brain to reduce cravings and suppress hunger making it easier for you to control your appetite.

NALTREXONE AND BUPROPION: A PROVEN COMBINATION FOR WEIGHT LOSS

This combination has been prescribed for years to enhance weight management efforts in overweight or obese adults. In three clinical trials, the combination of bupropion and naltrexone was more effective in reducing body weight than diet and exercise alone. Together these two medications activate a part of the brain that controls hunger.

When taken in smaller doses, low dose Naltrexone has been shown to help modulate and reduce appetite. Today, patients use low dose Naltrexone to reduce binge eating episodes, normalize appetite, and lose stubborn fat quickly.

Bupropion is an appetite suppressant considered to produce less central nervous system disturbance than most drugs in this therapeutic category. It is also considered to be among the safest for patients with hypertension.

PHENTERMINE SUPPRESSES APPETITE

Phentermine has been the most significant ingredient for weight loss in the US since it was approved by the FDA in 1959. It is used together with diet and exercise to treat obesity, especially in people with risk factors such as high blood pressure, high cholesterol, or diabetes.

In May 2011, the FDA approved a phentermine hydrochloride orally disintegrating tablet for the treatment of exogenous obesity.

METFORMIN AND TOPIRAMATE CONTROL BLOOD SUGAR

Metformin is a prescription medication used to treat type 2 diabetes. Several large-scale studies have shown its effectiveness in weight loss, by regulating hunger in the brain, reversing changes associated with aging, or altering the microbiome in the gut.

People who take Topiramate and have a reduced appetite may feel hungry less often and eat less because of this. Studies have shown that Topamax may also speed up metabolism, which means that the body burns calories more quickly. When tested in clinical trials, Topiramate induced weight loss and improved blood sugar control in adults with Type 2 Diabetes, Obesity and helps with Appetite Control.

VITAMIN B12 BOOSTS METABOLISM

Vitamin B12 has been linked to weight loss, and deficiencies may increase the risk of obesity. Several studies have found a link between low vitamin B12 levels and type 2 diabetes, high blood pressure, obesity, and metabolic syndrome.

OXYTOCIN REDUCES CRAVINGS AND INCREASES SATIETY

Animal studies have revealed that oxytocin reduces the desire for food intake, increases energy expenditure, and increases fat breakdown. In people, it decreases cravings for high-calorie foods and increases satiety. Studies show that oxytocin levels decrease with age. Oxytocin is also integral to the stress response. It dampens the brain's response to stress, reducing anxiety.

Researchers discovered that restoring oxytocin levels also boosted the activity of muscle stem cells, potentially increasing calorie-burning muscle cells.

Bella combines these well-studied compounds that synergistically work in the brain to control your cravings and modulate your appetite while also improving sleep quality, decreasing anxiety, and improving a sense of social connection.

THE BELLA CAPSULE: THE MOST POTENT WEIGHT LOSS SUPPLEMENT ON THE MARKET

The Most Powerful Weight Loss Medications Combined in 1 Capsule

Bella is a complex, powerful and All-in-One scientifically compounded premium weight loss medication. Bella Capsules were specifically formulated with different medications that work in different ways to suppress appetite and reduce cravings.

WHAT IS IN BELLA?

Bella Capsules are a custom compounded proprietary blend of the main ingredients found in the two leading weight loss medications; Contrave and Qsymia. In addition **B12** is added to help with energy and metabolism. This medication attacks weight loss by reducing appetite and cravings. Appetite suppression is achieved with **Phentermine** and **Topiramate**. Cravings are reduced by affecting the addictive pathways in the brain through a combination of **Naltrexone** and **Bupropion**. This medication is only available by a prescription and requires a thorough examination by the physician to see if you are a candidate.

HOW DOES BELLA WORK?

Bella is made up of four medications and concentrated Vitamin B12 that are all known for their ability to support weight loss, together these medications are an All-in-One weight loss solution that can deliver powerful results!

BENEFITS OF BELLA

Though the primary advantage of using Bella is weight loss, you may also experience improved mood, increased energy, and improved cognition.

- Better Mood
- Improved Mental Clarity
- More Restful Sleep
- More Energy
- Decreased Cravings and Increased Satiety
- Enhanced Memory Function
- Decreased Anxiety
- Enhanced Libido
- Increased Strength
- Better Glucose Utilization

WHICH BELLA IS RIGHT FOR YOU?

Bella comes in 3 formulations and depending on your sensitivity and medical history, the Doctor will evaluate you to determine which Bella would be best suited for your weight loss journey.

- BELLA with Phentermine
- BELLA with Caffeine and Oxytocin
- BELLA with Metformin

LIPOBURN CAPSULES

This medication is similar to Bella Capsules in that it reduces appetite and cravings but has less ingredients. It combines a higher dose of Phentermine with Naltrexone and caffeine to enhance energy levels more than Bella Capsules. For some people a big part of losing weight is also having the energy to exercise. Lipoburn capsules increase energy while at the same time reducing appetite and cravings.

PRODUCT SHIPPING

Bella is a unique controlled medication and must be shipped to you the next day from our compound pharmacy.

This medication is only available by a prescription and requires a thorough examination by the physician to see if you are a candidate. Bella is not for everyone and cannot be obtained at a local pharmacy.
